

FLEXSET BUILDING AUTOMATION CONTROLS

FlexSet control systems are not a one-size-fits-all offering. You get a custom solution that enables you to build upon your past mechanical and lighting investments, meet today's need and prepare to take advantage of emerging technologies.

WITH FLEXSET BUILDING AUTOMATION, YOU EXPERIENCE MAXIMIZED HEATING AND COOLING PERFORMANCE FOR COST SAVINGS, CONVENIENCE OF USE, AND COMFORT FOR FACILITY OCCUPANTS.

You have the ability to monitor and control one or multiple facilities. Your business will gain cost savings and productivity as you make system adjustments or address problems from an on-site or remote location 24/7. Other benefits to your business include:

- Decreased downtime through remote troubleshooting;
- Improved service diagnostics;
- Seamless integration of all key facility systems and control devices.

With our graphical, web-based interface, you can identify at a glance any comfort system issues within your facility. This includes open protocol controls to integrate your existing systems so they can “talk” to one another.

Our advanced reporting gives you a daily, weekly or monthly view of your facilities' key parameters such as temperature and indoor air quality and provides flexibility to manage your system.

GEM Energy also offers a FlexSetDG option for energy monitoring of Combined Heat and Power (CHP) systems as well as solar arrays.
